# Guarantee

**WE GUARANTEE** all nursery stock we sell to be true to name; nevertheless, it is mutually understood and agreed that should any stock prove untrue to name, the nursery shall refund purchase price or replace free, at the option of purchaser, and shall in no case be further responsible.

Conditions governing life of stock after shipping is beyond our control, so we make no guarantee as to life of plants we sell; however, in accordance with the policy recommended by the Washington State Nurserymen's Association, replacements will be made at half-price on any items that fail to grow by July 1st following planting, through no fault of customer—no adjustment after lapse of that period.

**SHIPPING SEASON** — Our shipping season begins about November 1, and continues until late spring. Where planting conditions are favorable, and if customer requests, we can make shipments in mid-winter.

**WE PAY POSTAGE:** We pay the Postage or Freight (except on Shade and Ornamental trees and Evergreens), in the State of Washington. Small orders of fruit trees will be pruned back to meet Postal regulations and shipped Parcel Post.

Evergreens and Shade trees shipped Auto Freight or Express, Collect. Please state preference.

**OUT OF STATE SHIPMENTS** shipped freight collect, except on small orders which can be shipped Parcel Post, to which please add 15% to cost of order to help pay Postage and Packing.

**SALES TAX** — If you live in the State of Washington add  $3\frac{1}{3}$  per cent sales tax.

# PLANTING INSTRUCTIONS

## GENERAL

**DO NOT** use commercial fertilizer or barnyard manure in such a manner that it comes in contact with roots.

**DO NOT** expose roots to air.

It is beneficial to the trees or plants to immerse the roots in water before planting. Many failures of newly transplanted stock are due to lack of proper pruning. Follow pruning instructions given for each class of nursery stock. The holes for planting must be large enough to receive the roots freely without bending them from their natural position. All broken or mutilated portions of the roots should be cut off so as to leave the ends smooth. All trees and plants should be planted two inches deeper than they stood in the nursery row; pack the soil firmly about the roots by tamping with the feet, being careful not to bark or break the roots. Leave three inches of the surface soil loose to serve as a mulch. If the ground is very dry apply one or two pails of water before this soil mulch is in place and after the water has soaked away it can then be placed over the moist soil.

**FRUIT TREES.** Follow general planting instructions.

**Branched.** Select three or four of the best side branches, well-spaced so as to balance the tree. Prune these back one-third and cut off all other branches close to the trunk.

**Whips (without branches).** Trees having no side branches, cut off top just above a bud 24 to 36 inches from the ground.

**SHADE TREES.** Follow general planting instructions. Shade trees having a heavy top, at least one-third of the top area should be removed. Prune to avoid crowding the branches. Cut out some of the smaller branches and shorten back the side branches, but do not cut off the leader or main stem.

**ROSES.** Follow general planting instructions. Be sure that the bud is two inches below the ground. If the soil is dry, it is well to plant the rose solidly, then wet thoroughly and after the water has soaked away, throw up a small mound of earth five or six inches high around the plant. Then cut off the branches one inch above the mound, leaving it this way for ten days or two weeks, or until the buds start and show a desire to grow, when the dirt mound can be raked down. Roses handled in this manner seldom fail to make a good start and a very satisfactory growth.

**RASPBERRIES, BLACKBERRIES, YOUNGBERRIES, LOGANBERRIES, BOYSENBERRIES and DEWBERRIES.** Follow general planting

(Continued on back page.)

# Planting Instructions

(Continued from inside back page.)

instructions. Cut back tops within six inches of the ground.

**BLUEBERRIES, CURRANTS and GOOSE-BERRIES.** Follow general planting instructions. These plants require no pruning until shoots begin to crowd, after several years.

**STRAWBERRIES.** Dip roots in water and plant immediately then irrigate or pour a pint of water around each plant. Plants are easier to handle if roots are sheared off a little, leaving them about four inches long.

**GRAPE VINES.** Follow general planting instructions. Prune back to one cane and cut this cane back to two or three buds.

**PRIVET** for hedges. Follow general planting instructions. Prune back to six to ten inches above the ground.

**EVERGREENS and BROADLEAF EVERGREENS.** These plants are dug with a ball of earth and wrapped in burlap. Dig the hole about six inches wider than necessary to receive the ball of earth; however they should not be planted any deeper than they stood in the nursery. Half fill the hole with good rich top-soil, pour in enough water to fill the hole so that it will wash the dirt solidly around the base of the ball. Straighten the plant up; cut the wrapping around the top of the ball, and fill in remainder of hole with dry soil, tamping down firmly. Leave a basin-like depression around the plant to facilitate absorption of water. **Do not make a hill**, as it compels the water to flow away from the plant. All evergreen plants need a mulch, which prevents evaporation of water in the soil. Peat moss is an excellent material for this purpose.
